

NAYAN DILIP KAWALKAR

Full-Stack Developer | Agentic AI & RAG Systems

Nagpur, Maharashtra, India | +91 9579645565 | kawalkarnayan07@gmail.com | linkedin.com/in/nayankawalkar | live

SUMMARY

Full-stack developer (MERN, Django) with equally strong depth in agentic AI — multi-agent orchestration, RAG pipelines, and LLM-powered automation. Built production-grade multi-agent WhatsApp automation for e-commerce clients and independent projects spanning brokerage-data aggregation, financial analytics, and conversational RAG interfaces. Comfortable owning a build end-to-end: frontend, backend, vector pipelines, and deployment.

TECHNICAL SKILLS

- **Agentic AI & RAG:** Multi-agent orchestration, tool-calling loops, RAG pipelines, chunking & embedding strategies, prompt engineering, structured output (Pydantic)
- **LLM & AI Platforms:** Anthropic Claude API, Gemini API, MiniMax LLM, LangGraph (in progress)
- **Data & Vector Infra:** Supabase (Postgres + vector store), Upstash Redis (caching/context), MongoDB, SQL
- **Full-Stack Development:** React.js, Node.js/Express, Django, MERN stack, REST APIs
- **Languages:** Python, JavaScript/TypeScript, Java, C/C++
- **Mobile & Tools:** React Native, Android Studio, Git/GitHub, Figma, Framer, WordPress

FEATURED AI PROJECTS

Stocker — Portfolio Intelligence Hub — *Multi-broker AI portfolio analytics platform*

- *Win Design Labs*

- Built a multi-user platform aggregating holdings, transaction history, and ledgers across multiple Indian and US brokers into a single unified view.
- Designed an agentic analytics layer (Stocker Copilot) that answers free-form natural-language questions about portfolio performance, best/worst-performing stocks, and individual stock history.
- Implemented per-stock deep-dive views combining transaction timeline, market conditions at buy/sell points, and AI-generated insights delivered via notifications.
- Integrated real-time news retrieval filtered to the user's actual holdings, surfacing only stock-relevant signals rather than generic market news.
- Hosting: Frontend (React.js) - vercel | Backend (node.js/express) - render

[Live](#) - [GitHub](#) - [Post](#)

AI Portfolio Chatbot — *Conversational RAG system for a personal portfolio site*

- *Win Design Labs*

- Built a full RAG pipeline: content authored in Notion, synced every 6 hours, chunked, embedded via Gemini embeddings, and stored as vectors in Supabase.
- Used Upstash Redis for conversational context and response caching; MiniMax LLM for response generation grounded in retrieved context.
- Designed dynamic UI generation from chat — e.g. asking about a project renders clickable project cards; asking about blog posts renders AI-summarized blog cards inline. - Framer
- Delivered a natural, first-person conversational tone so visitors could ask the portfolio owner's assistant anything and get accurate, source-grounded answers.
- Hosting: Frontend (Framer) - | Backend (node.js/express) – Hostinger

OTHER PROJECTS

YC Directory — *Startup pitch-sharing platform*

Social platform for uploading startups with Markdown pitches; full auth and database integration.

[Live](#) · [GitHub](#)

Digital Framing — *AI-integrated agriculture platform (Jun 2024 – Mar 2025)*

Cross-platform (React Native + React.js web) app for farmers with chatbot support and image-based crop issue detection, plus a peer knowledge-sharing feature; shared backend across mobile and web.

EXPERIENCE

Full Stack Developer Intern | *Win Design Labs*

15 March, 2026 – Present

- Developed full-stack features end-to-end using React.js and Node.js/Express, from UI components to backend APIs and database schema design.
- Integrated multiple LLM providers (Gemini, MiniMax) into production features, including prompt design, retrieval-augmented generation, and dynamic UI rendering from chat responses.

[Post - \(click here\)](#)

Senior Web Development Intern | *KodeKalp Pvt. Ltd.*

Aug 2025 – Nov 2025

- Built and maintained end-to-end web applications using React.js and Node.js/Express, implementing features, APIs, and integrations across the MERN stack.
- Collaborated cross-functionally to improve scalability, performance, and code quality.

Junior Web Development Intern | *SSIT Pvt. Ltd.*

June 2023 – July 2024

- Developed web application components with Django and supported backend feature implementation.
- Performed unit testing with pytest and built basic SEO tooling in Python.

Team Lead | *National-Level Hackathon & Project Competition*

Mar 2025

- Led a team through a national-level project competition end-to-end; won 1st Prize (21 March 2025).

EDUCATION

B.Tech, Computer Technology | *Priyadarshini College of Engineering, Nagpur*

Aug 2025 – May 2027

Diploma, Information Technology | *Government Polytechnic, Gondia*

Aug 2022 – May 2025

HSC / SSC | *Jyotiba Madhyamik Vidyalaya Jr. College*

2018 – 202

AWARDS & ACHIEVEMENTS

- 1st Prize, National-Level Project Competition — AI-based Smart Farming Application (March 2025)
- 1st Winner, Innovation Ideas (GPG-25) — Dept. of Information Technology, Government Polytechnic, Gondia (March 2025)
- 2nd Runner-Up, State-Level Paper Presentation — Best Presentation 2K24, Shirpur College of Engineering, Kolhapur
- Runner-Up, Innovation Idea Hackathon 2024 — Dept. of Information Technology, Government Polytechnic, Nagpur
